

Appl. No. 10/757,681
Examiner: WRIGHT, INGRID D, Art Unit 2835
In response to the Office Action dated February 7, 2006

Date: April 26, 2006
Attorney Docket No. 10113621

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claims 1 (canceled)

Claim 2 (currently amended): The electronic device as claimed in claim [[1]] 5, ~~further comprising a wherein the second display displays disposed on the body, to display~~ an image captured by the sensor.

Claim 3 (currently amended): The electronic device as claimed in claim [[2]] 5, wherein the second display enters a standby mode when the rotating member is rotated to a predetermined angle at which the sensor faces the body.

Claim 4 (currently amended): The electronic device as claimed in claim [[3]] 5, wherein in standby mode the second display is disabled.

Claim 5 (currently amended): An electronic device, comprising:

a body;

a rotating member rotatably connected to the body and having a first surface and a second surfaces opposite to the first surface;

a first display disposed on the first surface of the rotating member; and

a second display disposed on the body; and

an image capture sensor disposed on the second surface of the rotating member, to allow capture of images from multiple angles when the rotating member is rotated, wherein the rotating member comprises a first metal contact portion and the body comprises a second metal contact portion, and the second display is enabled when the first metal contact portion contacts the second metal contact portion, and the second display enters a standby mode when the first metal contact portion is separated from the second metal contact portion.

Appl. No. 10/757,681

Examiner: WRIGHT, INGRID D, Art Unit 2835

In response to the Office Action dated February 7, 2006

Date: April 26, 2006

Attorney Docket No. 10113621

Claim 6 (original): The electronic device as claimed in claim 5, wherein the rotating member has a shaft rotatably connected to the body, and the first metal contact portion is formed on the shaft.

Claim 7 (original): The electronic device as claimed in claim 6, wherein the shaft has a notch interrupting the surface of the second contact portion, such that the first metal contact portion separates from the second metal contact portion when the notch aligns with the second metal contact portion.

Claim 8 (original): The electronic device as claimed in claim 7, wherein the second metal contact portion is pointed.

Claims 9-13 (canceled)

Claim 14 (currently amended): The electronic device as claimed in claim [[3]] 5, wherein the first display is a text display, when the second display enters a standby mode, the first display displays a plurality of text messages.

Claim 15 (currently amended): The electronic device as claimed in claim [[2]] 5, wherein the first display is smaller than the second display.

Claim 16 (currently amended): The electronic device as claimed in claim [[2]] 5, wherein the first display is monochrome and the second display is multicoloured.

Claim 17 (new): An electronic device, comprising:

- a body having a first contact portion;

- a rotating member rotatably connected to the body, the rotating member having a second contact portion;

- a display disposed on the body; and

- an image capture sensor disposed on the electronic device, wherein the display is enabled when the first contact portion contacts the second contact portion, and the display enters a standby mode when the first contact portion is separated from the second contact portion.
